## VOICE/SPEECH IC

## 3-24 SECOND MASK IC BODY

### Features

- \* Single power supply can operate from 2.4v through 5v.
- \* The total voice duration is about 3,6,9,12,18,24 seconds could be partitioned up to 32 voice sections.  
each voice section could have 4 playing\_length, the longest one is the original voice+mute length.
- \* Voice + mute length could up to 22 seconds ( 6k sample rate ) for each voice section.
- \* One 255 voice-steps table, could be partitioned up to 32 groups of voice-step.  
For each voice-step, could specify one length of one voice section and one of 5 levels playback speed and STS1,STS2, STS3,STS4 enable options.  
playback speed : 1>4.3k ; 2>5k ; 3>6k ; 4>7.5k ; 5>10khz.  
STS4,3,2,1 enable options : each with one control bit.  
( dec to bin ; '0' -> enable , '1' -> disable )
- \* Three mask option trigger input mode : MATRIX , ALONE  
( with mode selection ,priority and debounce )  
one mode control input 'MODE' ,could be used as mode selection or STS4. ( mask option )  
MATRIX : 4x4 matrix inputs ; M1-- M16  
(MODE=0 -> subtable1 - 16 ;  
MODE=1-> subtable17 - 32 )  
priority : M1>M2>M3>M4 ; M5>M6>M7>M8 ;  
M9>M10>M11>M12 ; M13>M14>M15>M16.  
debounce : 11ms or 1ms.  
ALONE : 8 alone inputs ; A1 -- A8 ( MODE=0 -> subtable1 - 8 ;  
MODE=1 -> subtable9 - 16 )  
each input could be one of 3 resistive type input :  
1>10Mohm to GND ; 2>schmitt ( 270k - 1M ) for CDS  
interface ; 3>schmitt ( 270k - 10M ) for CDS interface.  
A1 could be trigger input or control outputs ( COUT,  
PWM, STS ) enable ( '1' ) or disable ( '0' ).  
priority : A1>A2>A3>A4>A5>A6>A7>A8 .  
debounce : 10ms or 50us  
If MODE/STS4 is in STS4 mode, MATRIX only  
( subtable1- 16 ), ALONE only ( subtable 1 - 8 )  
In both mode, all the trigger input could be assign as  
different playing mode with following options :  
EDGE/LEVEL ; HOLD/UNHOLD ;  
RETRIGGER/IRRETRIGGER.  
CPU\_INTERFACE : addressing access mode by input  
pulse count, in this mode A1 - A7 were disable, could  
be access up to 32 subtables.
- \* A8 or M16 could be mask\_selected as NORMAL,  
SEQUENTIAL or CPU\_INTERFACE.  
NORMAL : normal mode as in item 5 .  
SEQUENTIAL : could be mask\_selected as combined with  
MODE input or not.  
If A8 or M16 is in SEQUENTIAL and combined with MODE  
input :  
MODE=1 ->the device will response by one subtable  
sequentially and cyclically, from subtable1  
to user\_specify end subtable.

- MODE=0 ->the device will response by one subtable  
sequentially and cyclically, from subtable1  
to user\_specify end subtable.  
The number of subtables ( used in sequence ) in MODE=1  
and MODE=0 must be equal ; this number must less than 16.  
If A8 or M16 is in SEQUENTIAL and not combined with  
MODE input :  
The device will response by one subtable sequentially and  
cyclically, from subtable1 to user defined end subtable.  
The relationship between SEQUENTIAL ( A8/M16 ) and other  
inputs ( A1-A7/ M1-M15 ) could be mask\_selected as RESET  
or UNRESET.  
RESET : once the other inputs were triggered the SEQUENTIAL  
sequence will reset to subtable 1.  
UNRESET : sequential sequence and other inputs are indenpent.
- \* 4 OUT pins with following options :  
OUT1 : COUT or STS1      OUT2 : PWM1 or STS2  
OUT3 : PWM2 or STS3      OUT4 : MODE or STS4  
COUT has 3 current output levels : 1>1.5mA ; 2>3mA ; 3>4.5mA .  
( full scall ; vdd=3v )  
PWM1 and PWM2 must be selected on the same time, can  
direct driving BUZZER or 8 or 32 or 64 ohm SPEAKER.
  - \* 4 status outputs ( STS1, STS2, STS3, STS4 ) , one mask  
option status output ( MODE/STS4 ) :  
\* STS1

In this mode, some of the mask\_options must set as follow :

MATRIX/ALONE -> ALONE ; SEQUENTIAL/NORMAL -> SEQUENTIAL ; sequential not combined with MODE ;  
 RESET/UNRESET -> RESET

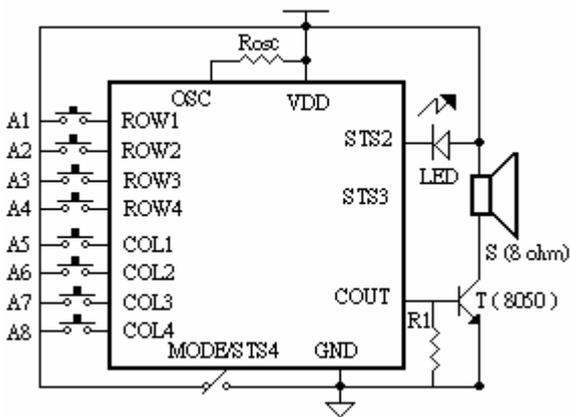

The A8 input playing mode as right, EDGE/LEVEL -> EDGE ; HOLD/UNHOLD -> UNHOLD ;  
 RETRIGGER/IRRETRIGGER -> RETRIGGRR

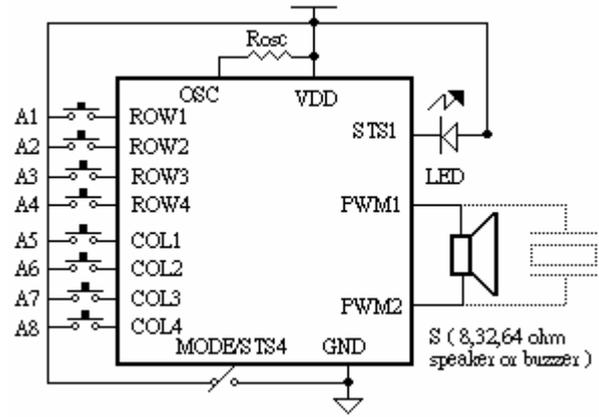

All the timing are base on 6khz sample rate.
